                                                                                                                                                                                                                                                  through a linker to a solid phase, forming a complex of (A)-solid phase.

through a linker to a solid phase, forming a complex of (A)-solid phase.

where (A) comprises 10-50 amino acids capable of forming a secondary

curture in a benign buffer after liberation from the solid phase, and

further the (A)-solid phase complex comprises an immunogenic substance

and/or an immune mediator coupled on (A). The present sequence

represents a peptide used in an example from the present invention. An

(A)-solid phase complex can be used as a scaffold for the production of

chemical derivatives, characterised by covalently attaching molecules at

attachment points. Alternatively (A) is used as a scaffold peptide for

the incorporation into an Immunostimulating Complex (Iscom) resulting an

(A)-iscom complex which is used for the chemical coupling of antigenic

substances in an aqueous solution by conjugation. (A) derivatised with

one or more peptides having fibronectin., laminin. or vitronectin.like

binding activities can be used for the promotion of cell-attachment to

plastic surfaces, in particular to inhibit tumour growth and metastasis,

and for promotion of wound healing. Also a derivatised (A) can be used

for the selection of specifically-binding aptamers or as a diagnostic

agent. Such diagnostic (A) molecules could be used to detect molecules

cherical course of promotion of preparancy or of a disease, such as an

The present sequence represents a peptide derived from a human tumour necrosis factor peptide. The peptide can have neutrophil and/or monocyte/macrophage stimulatory activity. The peptide is derived from the sequence of tumour necrosis factor (TNF)-derived peptide 419 (PSTHVLITHTI; see A074762/91 and 44664/93). It can have improved properties such as increased potency, extended in vivo half life or, particularly, specificity of action. It can have neutrophil stimulatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                Peptide with partial amino acid sequence of gamma interferon - used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Tumour necrosis factor derived peptide(s) having neutrophil and-or monocyte-macrophage stimulatory activity - used for treating e.g. infections, immunosuppression or cancers
                                                                                                                                                                                                                                                                                                  pe
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; tumour necrosis factor; neutrophil; monocyte; macrophage; stimulatory activity; immunosuppressant; cancer; infection.
                                                                                                                                                                                                                                                                                     The N-terminal Tyr residue is optional. The peptide hapten can bound to a carrier and used to prepare IFN gamma-specific antibodies. It may also be used in radio- or enzyme immunoassays. See also AAP40301.

polymerase, oncogenes, histones, kinases, colony stimulating factors, complement related proteins, cytochromes, kinesins, cytokines, interferons, interleukins, G-protein coupled receptors and thioesterases. The present sequence is a peptide encoded by one such oligonuclectide. The oligonuclectides and the peptide encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate expression of the proteins listed above. Disorders that may be prevented, diagnosed and/or treated include multifactorial diseases with a genetic component, such as autoimmune diseases (e.g. rheumatoid arthritis, multiple sclerosis, diabetes, systemic lupus erythromatosus and Grave's disease), inflammation, cancer (e.g. cancers of the bladder, brain, breast, colon and kidney, leukaemia), diseases of the nervous system and an infection of pathogenic organisms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to methods for identifying polypeptides comprising PDZ domains, and their encoding nucleic acids. The sequences are used to identify modulators of their expression, function and activity, for use in the diagnosis and treatment of PDZ related disorders. Antibodies against the proteins and cells that produce them may be used for the treatment of PDZ-mediated disease states. Sequences AARG87843-AAUB7974 represent proteins containing PDZ domains, fragments of these proteins and other related peptides used in the methods of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Methods for identifying polypeptides comprising PDZ domains, the polypeptides and their encoding nucleic acids, useful for the diagnosis and treatment of PDZ related disorders -

When bound with a medically useful metal (e.g. an isotope of Tc, Re, In, Au, Ag, Hg or (U), the composition and for diagnostic imaging. The composition allows direct binding with a metal without the necessity of cohjugation to bifunctional chelators. Metals can be bound while retaining the high activity of the biological function domains.

Gaps
The present sequence represents a chemotactic peptide (a preferred example of a biological function domain) joined to a metal ion binding domain. When bound with metal, this peptide can be used for the detection of sites of neutrophil accumulation for the diagnosis of infection and sterile inflammation.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 10, Agreement 10, Agreement 10, Agreement 13, April 10, Agreement 13, Agreement 13, Agreement 143, Agreement 19, Agreem

Application US/09518046

Patent No. 6294663

GENERAL INFORMATION:
APPLICANT: O'Brien, Timothy J.
APPLICANT: O'Brien, Timothy J.
TITLE OF INVENTION: Transmembrane Serine Protease Overexpressed
TITLE OF INVENTION: in Ovarian Carcinoma and Uses Thereof
FILE REFERENCE: D6192CIP
CURRENT APPLICATION NUMBER: US/09/518,046
CURRENT FILING DATE: 2000-03-02
FARLIER APPLICATION NUMBER: 09/261,416
BARLIER PLING DATE: 1999-03-03
NUMBER OF SEQ ID NOS: 153

Patent No. 6242212
GENERAL INFORMATION:
APPLICANT: Croce, Carlo M.
APPLICANT: Huebner, Kay
TITLE OF INVENTION: FHIT PROTEINS AND NUCLEIC ACIDS AND
TITLE OF INVENTION: METHODS BASED THEREON
NUMBER OF SEQUENCES: 86
CORRESPONDENCE ADDRESS:
ADDRESSEE: Pennie & Edmonds
STREET: 1155 Avenue of the Americas
Sequence 54, Application US/08598873
Patent No. 5928884
GENERAL INFORMATION:
APPLICANT: Croce, Carlo M.
APPLICANT: Huebner, Kay
TITLE OF INVENTION: METHODS BASED THEREON
TITLE OF SEQUENCES: 77
CORRESPONDENCE ADDRESS:
ADDRESSEE: Pennie & Edmonds

TISSUE SPECIFICITY: Expressed by the venom duct.
SIMILARITY: BELONGS TO THE A-SUPERFAMILY OF CONOTOXINS. ALPHA-TYPE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        MEDLINE-99242956; PubMed-10226369; Wolfender F., Fainzilber M., Wolfender J.L., Chu F., Ball H., Wolfender J.L., Chu F., Ball H., Wolfender J.L., Chu Burlingame A.L.; Indentification of tyrosine sulfation in Conus pennaceus conotoxins alpha-PnIB and alpha-PnIB: further investigation of labile sulfor and phosphopeptides by electrospray, matrix-assisted laser description/ionization (MALDI) and atmospheric pressure MALDI mass
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   PDB; 1PEN; 21-APR-97.
Postsynaptic neurotoxin; Neurotoxin; Toxin;
Acetylcholine receptor inhibitor; Amidation; Sulfation; 3D-structure.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ALTERIATION OF A CIVISTAL STRUCTURE Of the neuronal acetylcholine receptor antagonist, alpha-conotoxin PnIA from Conus pennaceus."; Structure 4:417-423(1996).

-i- FUNCTION: ALPHA-CONOTOXINS ACT ON POSTSYNAPTIC MEMBRANES, THEY BIND TO THE NICOTINIC ACETYLCHOLINE RECEPTORS (NACHR) AND THUS INHIBIT THEM. IN CONTRARY TO OTHER ALPHA-CONOTOXINS, WHICH ARE SELECTIVE FOR VERTEBRATE SKELETAL MUSCLE NACHR, THE CONUS PENNACEUS ALPHA-CONOTOXINS BLOCK NACHR IN MOLLUSKS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

J. BIOCHEM. 230:235-241(1995).

-1- FUNCTION: THIS PROTEIN IS ONE OF THE NUCLEAR-CODED POLYPEPTIDE CHAINS OF CYTOCHROME C OXIDASE, THE TERMINAL OXIDASE IN MITOCHOUDRIAL ELECTRON TRANSPORT.

-1- CATALYTIC ACTIVITY: 4 ferrocytochrome c + 0(2) = 4 ferricytochrome

                                                                disorders, thrombotic disorders, or illnesses or pathologies which can be treather by decreasing plasma fibrinogen. Typical conditions which can be treated include acute mycardial infarction, deep vein thromboshiesis, stroke, thromboembolic disorder or ischemic events. In one embodiment the antagonist used is an anti-TNF antibody (optionally chimeric, humanised or resurfaced), preferably one which binds to an epitope comprising at least 5 amino acids within the region TNF-alpha 87-108 and/or TNF-alpha 59-80. The present sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (TNF-alpha) corresponding to amino acid position 87-108 of the full length protein. This region is an epitope and is recognized and/or binds with anti-TNF activity. This fragment is used to describe a novel method of treating or preventing acquired immune deficiency disease and infection with human immune deficiency virus (HIV) by co-administration of interleukin-2 (IL-2) and a chimeric antibody (Ab), or its fragment, against tumour necrosis factor (TNF). IL-2 and Ab are administered by infection, orally, topically or are produced from gene therapy vectors,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Tumour necrosis factor-alpha; epitope; human immunodeficiency virus; HIV; TNF-alpha; anti-TNF; antibody; treatment; prevention; infection; acquired immune deficiency disease; interleukin-2; IL-2; gene therapy; systemic toxicity; CD4+ cell; inflammation; immune response.
                                                                                                                                                                                                                                                                                                                                        Gaps
                                                   The invention relates to the use of an antagonist of tumour necrosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This peptide sequence is a fragment of tumour necrosis factor-alpha
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Treating or preventing acquired immune deficiency syndrome using interleukin-2 - and antibodies against tumour necrosis factor, to reduce side effects of the treatment

ö
but preferably by intravenous injection or infusion. Usual doses are 0.01-100 (especially 1-40) mg/kg/day, in 1-6 portions or in sustained release form. Further doses may be given, just before or during relapse. Inhibition of TWR alpha by Ab alleviates some of the systemic toxicity associated with administration of IL-2 (which increases the level of CD4-cells but also stimulates production of TNF, high levels of which cause unwanted inflammatory and immunological responses). Blockade of TNF allows administration of higher doses of IL-2 than would be otherwise possible.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New tumour necrosis factor derived peptides- for treating or preventing neoplastic and autoimmune diseases, infection, inflammation and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention describes a novel immunoadsorber (A) for treating sepsis which comprises a carrier of organic or synthetic polymer having bound to it poly- or monoclonal antibodies (Abl) against the complement factors cla and/or Csa and against lippoplysaccharide (LPS). Optionally other antibodies (Ab2) directed against other mediators of sepsis are also attached to the carrier. The products of the invention have anti-inflammatory and antisepsis activity. (A) are used for treatment, particularly by plasmapheresis, of sepsis and septic shock. The combination of antibodies used can be tailored to the requirements of
R, U, V and W= peptide chains of 1-4 naturally occuring alpha aminoacids; M and O= H, isopropyl, CHMe.Et, phenyl, CH(OH), 3-indolyl- or 4-inidazoly-methyl or (CH2)DT; D=1-6; T= OH, MeS, MeS, isopropyl, phenyl (opt. 4-OH, substd.), HS, NH2, COOH, CONH2, or NH2 C (NH) NH; or M ans Q together are (CH2)c-S-S-(CH2)d, (CH2)eCO NH-(CH2)f or CH2)zenH CO(CH2)gNH CO(CH2) f; c and d=1-4; e and f=1-6; g=1-12. The peptide is a low mol. wt. deriv. of TNF. See also DE3841753-55, DE3841759, DE3841761-64, DE3841767-68.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence represents a fragment of a tumour necrosis factor inhibitor of the invention. The inhibitors are antagonists of tumour necrosis factor-alpha (TNF-alpha), comprising less than 15 amino acids, having restricted conformation and capable of binding to TNF p55 and/or TNF p75 receptor. The inhibitors are useful for treating a disease or condition mediated by TNF-alpha such as sepsis syndrome, cachexia, circulatory collapse and shock resulting from acute or chronic bacterial infection; acute and chronic parasitic or infectious processes, including bacterial, viral and fungal infections; acute and chronic immune and autoimmune disorder, such as systemic lupus erythematosus and reunatoid arthritis, alcohol-induced hepatitis; chronic inflammatory disorder such as sarcoidosis and Crohn's disease; vascular inflammatory disorder such as disseminated intravascular coagulation, graft-versus-host disease, Rawasaki's disease, and malignant disorders involving TNF-alpha-secreting
                                                                                                           cachexia;
                                                                                                       Tumour necrosis factor; inhibitor; TNF-alpha; TNF p55 receptor; cachexitors immune disorder; sepsis syndrome; circulatory collapse; infection; immune disorder; systemic lupus erythematosus; rheumatoid arthritis; alcohol-induced hepatitis; inflammatory disorder; sarcoidosis; Crohn's disease; vascular inflammatory disease; therapy; disseminated intravascular coaqulation; graft-versus-host disease; Rawasaki's disease; malignant disorder; TNF-alpha-secreting tumour.

New peptides are provided which prime neutrophils for superoxide production and an enhanced respiratory burst following treatment production and an enhanced respiratory burst following treatment with N-formyl-L-methionine-L-leucyl-L-phenylalanine. The peptides are described generically. They are fragments from the region of amino acids 54 to 94 of human TNF, or analogues of such fragments. Their neutrophil-stimulating activity can be used in the treatment of diseases such as AIDS, cancer, rheumatoid arthritis, ARDS, cystic fibrosis, tuberculosis, Crofn's disease, sarcoidosis, leprosy, syphilis and malaria. The present sequence is one of 6 specific peptides having the above activity and which fit the the generic formula.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

The present invention describes the use of peptides comprising a chain of 7-17 contiguous amino acids derived from the Ser100-Gluil6 region of human tumour necrosis factor-alpha (TNF-alpha), or Ser99-Gluil5 region of mouse TNF-alpha, for treating oedema. The peptides form pharmaceutical compositions for treating oedema, especially pulmonary oedema. The peptides are non-toxic, whilst retaining the oedema resorption inducing capacity as TNF. The present sequence represents a specifically claimed TNF-alpha peptide from the present invention.
Use of peptides derived from human or mouse tissue necrosis factor-alpha (TNF-alpha), and comprising 7-17 contiguous amino acids, for preventing or treating oedema -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TNF-alpha; tumor necrosis factor-alpha; tip peptide; mutein; cancer; sepsis; inflammation; cytokine; metastasis; lectin; adhesion; mutagenesis; trypanoside.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The TNF-alpha tip peptides given in AAR60232-42 were modified with vierminal biotin-cly-Gly moleties and were used to demonstrate that the tip region of mouse and human TNF-alpha contains the trypanosomal and lectin-like activities of the molecule and is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New tumour necrosis factor -alpha muteins, antibodies and antisense peptide(s) - used in the treatment of diseases and conditions associated with the in vivo activities of TNF-A eg cancer, sepsis, inflammation, etc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                33.0%; Score 38; DB 21; Length 14; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes the use of peptides comprising a chain of 7-17 contiguous amino acids derived from the Ser100-Glul16 region of human tumour necrosis factor-alpha (TNF-alpha), or Ser99-Glul15 region of mouse TNF-alpha, for treating oedema. The peptides form pharmaceutical compositions for treating oedema, especially pulmonary oedema. The peptides are non-toxic, whilst retaining the oedema resorption-inducing capacity as TNF. The present sequence represents invention.

The invention relates to an isolated polypeptide of human cytochrome c domain-containing tumour necrosis factor receptor/nerve growth factor receptor (TNFR/NGFR) protein 51. The polypeptide comprises a sequence of 461 amino acids, or its fragment, analogue or derivative. The polypeptide and the polynucleotide encoding it are useful in the diagnosis and treatment of malignant tumours, haemopathy, HIV infection, immunological diseases and inflammation. The present sequence is the N-terminus of the polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human cytochrome c domain-containing TNFR/NGFR protein 51 and encoded polynucleotide, applicable in diagnosis and treatment of malignant tumor, hemopathy, HIV infection, immunological diseases and various

measuring human gene expression in a sample derived from human heart (see ABA21535-ABA41305). The present sequence is a protein encoded by one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardlovascular disease. Hypertension, cardiac arrhythmias and congenital heart disease. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human brain expressed single exon probe encoded protein SEQ ID NO: 26330
                                                                                                                                                                                          exon nucleic acid probes for analyzing gene expression in human
                                                                                                                                                                                                                                                                                      The present invention relates to single exon nucleic acid probes for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ŏ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                               The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of the probes of the invention.
                   Single exon nucleic acid probes for analyzing gene expression in human brains -
                                                                                                                                                                                                                                                                                                                                                                0; Gaps
